

SECTION 4.0 MAINTENANCE

[3.2.1.5 A schedule of implementation for all short term and long term activities describing the program development, implementation and maintenance]

NDOT's Maintenance Division will incorporate the Permit requirements concerning maintenance into NDOT's Maintenance Program. The maintenance activities within the Clear Creek watershed are consistent with the maintenance activities described in NDOT's statewide SWMP.

Additionally, NDOT's Spooner Sand and Salt Shed will develop and implement a Facility Pollution Prevention Plan (FPPP) per the Permit requirements. The FPPP will describe the facility and the control measures in place to prevent the discharge of pollutants from the site. The BMP selection, implementation, and maintenance at the site will be documented in the FPPP. The Spooner Sand and Salt Shed FPPP will be kept on record by NDOT maintenance according to Permit requirements, and revised as needed.
